☒ SL-8 View Maintenance Ticket History	= M	3	U	Done ▾

Sprint 2 – Sprint Report

Sprint 4 – Sprint Report

Sprint 2 – Burndown Chart

Sprint 4 – Burndown Chart

Reflection

1. Did your estimations reflect the actual effort?

Yes. The story-point estimates reasonably reflected the effort and complexity of the work. Stories with more functionality were assigned higher points, while simpler stories were given fewer points.

2. Was your backlog well-prioritized?

Yes. The backlog was prioritized according to the importance of the functionality. Core maintenance operations such as logging tickets, assigning staff, updating status, and tracking SLA were given higher priority.

3. How did your simulated sprint align with your plan?

The simulated sprints generally aligned with the plan. The selected stories were completed during the sprints and moved through the workflow from To Do to In Progress to Done.

4. What insights did the burndown chart give about your team's capacity?

The burndown charts showed how the planned story points decreased as work was completed. They helped us understand the team's progress and capacity and showed whether the sprint work was being completed within the planned time.
